DollaTek 5pcs 817 Optocoupler 2-Way Voltage Isolation Board Voltage Control Switch Module

Brand: DollaTek

4 ratings

Price: €8.99

FREE One-Day

Prices for items sold by Amazon include VAT. Depending on your delivery address, VAT may vary at Checkout. For other items, please see [details](#).

This module is used when it is necessary to isolate the control during actual work and voltage conversion. It can realize 3.3V or 5V to control the interface with a voltage level of 3.6V to 24V. After the control terminal is switched on, the controlled terminal is also switched on. The photoelectric insulation has a strong anti-interference. The latter can control high performance triodes, MOS tubes and other applications that require high voltage, and can also directly control 24V low-power relays.

- If this is a pulse signal, please note that the limit of 817 is below 4 kHz. If the control signal is greater than 4 kHz, please do not use this module, it will not work correctly.

Product description

Module parameters:

- 1. The drive terminal signal voltage: 3.6-24V
- 2. The output voltage range: 3.6-30V (output current depends on the specific situation, but the maximum is not 10MA, the total power is safe, the voltage and the current are reverse proportional)
- 3. The bridge cap can be achieved whether the output is high potential output or low output.
- 4. Card 2 over 817 is independent, can achieve simultaneous control of various voltages, etc.

Package includes:

5 x module.
